

Demo 2

Project: Graph Editor

Student: Ha Thanh Chu

Sprint 2 - backlog

Goal: The user will be able to styling a graph, filter, search, query

ID	User story/Backlog Item	How to Demo?
US6	As a user, I want to have some tools such like rule-based styling by attributes , zoom , dark mode so that I can customize and navigate the graph efficiently.	
US7	As a user, I want to filter nodes by type or status or something like that, so that I can focus only on relevant dependencies	
US8	As a user, I want to search for a node by name, so that I can quickly locate a specific entity in a large graph	

Sprint 2 - backlog

Goal: The user will be able to styling a graph, filter, search, query

ID	User story/Backlog Item	How to Demo?
US9	As a user, I want to extract a subgraph , so that I can analyze its local structure in detail	
US10	As a user, I want to compute the shortest path between two nodes, so that I can identify the minimal dependency chain	
US11	As a user, I want to expand the neighbors of a node step by step, so that I can progressively explore the graph.	

Demo 2 - Something new?

- All selected user stories included

Analysis

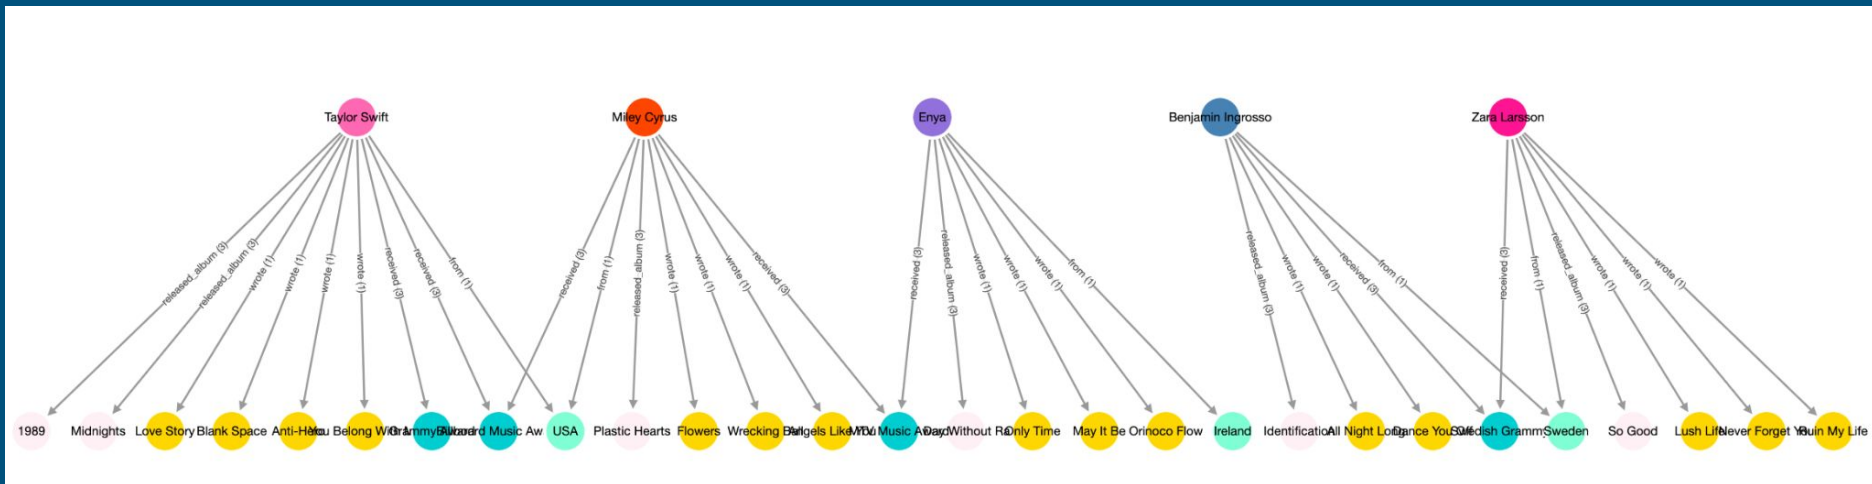

☐ Dark mode

- All selected user stories included
- Relationship texts displayed on arrows – with direction between edges

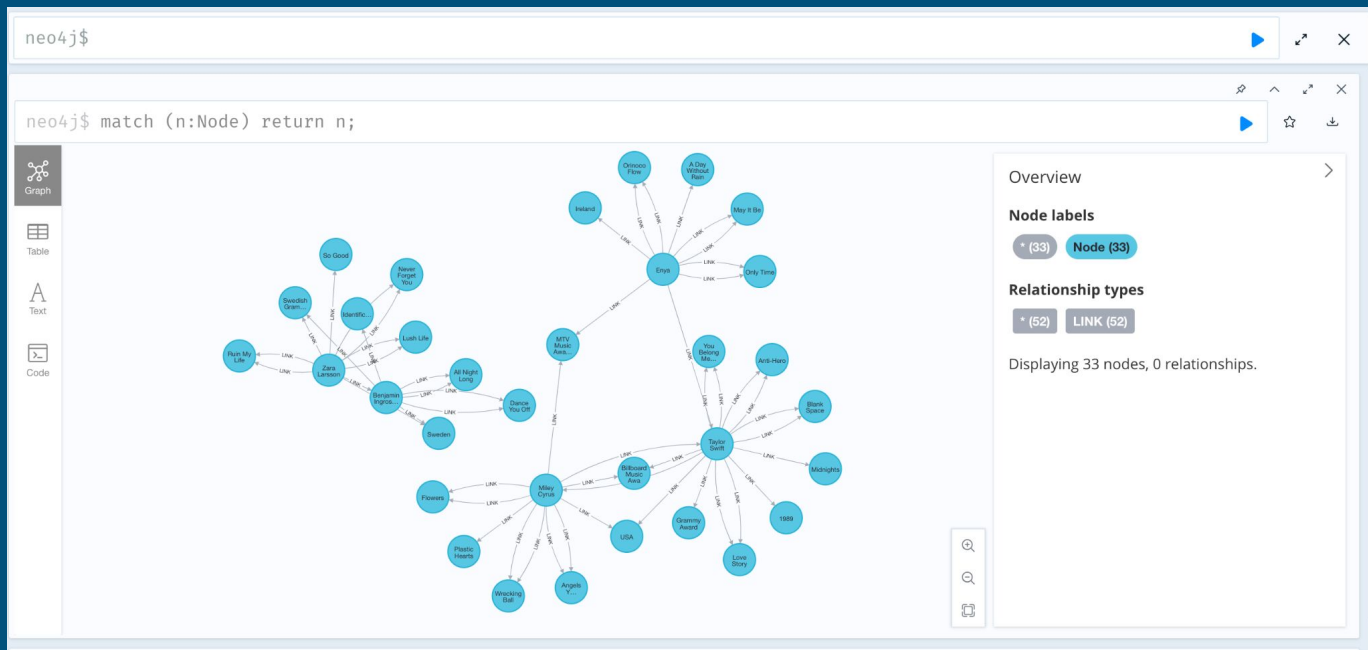

Demo 2 - Something new?

- Support for multiple roots in the hierarchy

- Database connected for storing graph data

No.	How to demo?	Note
1	Search a node by text	
2	Edit node attribute	
3	Edit edge attribute	
4	Zoom	
5	Dark mode	
6	Find shortest path from 2 nodes	
7	Find neighbors of a node	
8	Make a subgraph	

Thank you for listening!
